Simple conversion brings new life to MAC 250 Wash™

This new member of the industry's most popular 250 watt series is an extremely punchy and compact beam fixture that generates variably sized pencil beams as well as wash effects via a motorized frost filter. It is available as an easy and inexpensive upgrade that installs in only 5 minutes on any existing MAC 250 Wash™ fixture.

Simple, inexpensive upgrade

The MAC 250 Beam upgrade kit consists of a new front module with micro Fresnel lens and a set of six beam effect gobos/apertures. It converts any standard Martin Professional MAC 250 Wash into a MAC 250 Beam in a matter of minutes, bringing new life and value to existing MAC 250 Wash fixtures for very little cost.

Intense, tight beam

The MAC 250 Beam's intense light output and tight beam make for an extremely powerful mid air effect. The large diameter micro Fresnel lens produces a distinctive wide beam look that looks great mid-air, the same fat beam look as you get from 300 watt fixtures.

A very narrow 3 to 8 degree beam produces a real pencil effect, especially at smaller gobo apertures.

Colors and effects

A CMY color mixing system produces a broad spectrum of colors with smooth cross fades in between colors for spectacular mid air effects. The six static gobos/apertures plus open allow for wider or tighter beam effects as well as multiple beams or cone looks.

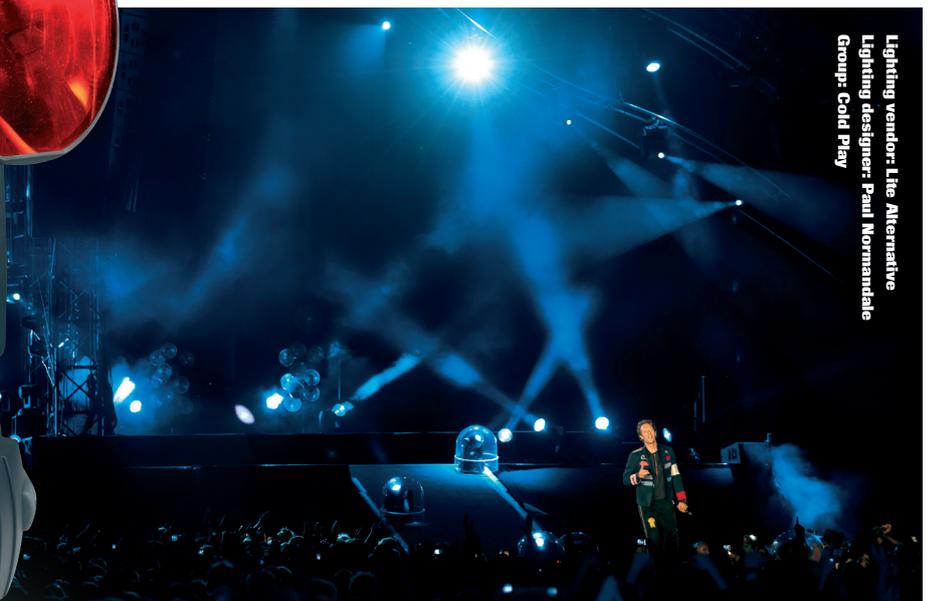

A motorized frost filter can be employed for soft beam or wash type effects and a high resolution dimming system provides smooth dimming and fast strobe effects.

Low noise, high speed

The MAC 250 Beam is exceptionally quiet with variable fan control that keeps noise levels low to suit theater and TV studio applications. It features all the remarkable speed and quiet movement of the MAC 250 Series.

Maintenance and service ease

The MAC 250 Beam's modular housing makes service and maintenance simple with fast access to modules and critical components for lower service costs and total cost of ownership.
